

## Feedback — Week 3 Quiz

[Help](#)

You submitted this quiz on **Sat 10 May 2014 8:29 PM CEST**. You got a score of **20.00** out of **20.00**.

### Question 1

We take a random sample of individuals in a population and identify whether they smoke and if they have cancer. We observe that there is a strong relationship between whether a person in the sample smoked or not and whether they have lung cancer. We claim that the smoking is related to lung cancer in the larger population. We explain we think that the reason for this relationship is because cigarette smoke contains known carcinogens such as arsenic and benzene, which make cells in the lungs become cancerous.

Your Answer	Score	Explanation
<input type="radio"/> This is an example of an descriptive data analysis.		
<input type="radio"/> This is an example of a causal data analysis.		
<input checked="" type="radio"/> This is an example of an inferential data analysis.	✓ 4.00	
<input type="radio"/> This is an example of a predictive data analysis.		
Total	4.00 / 4.00	

### Question 2

What is the most important thing in Data Science?

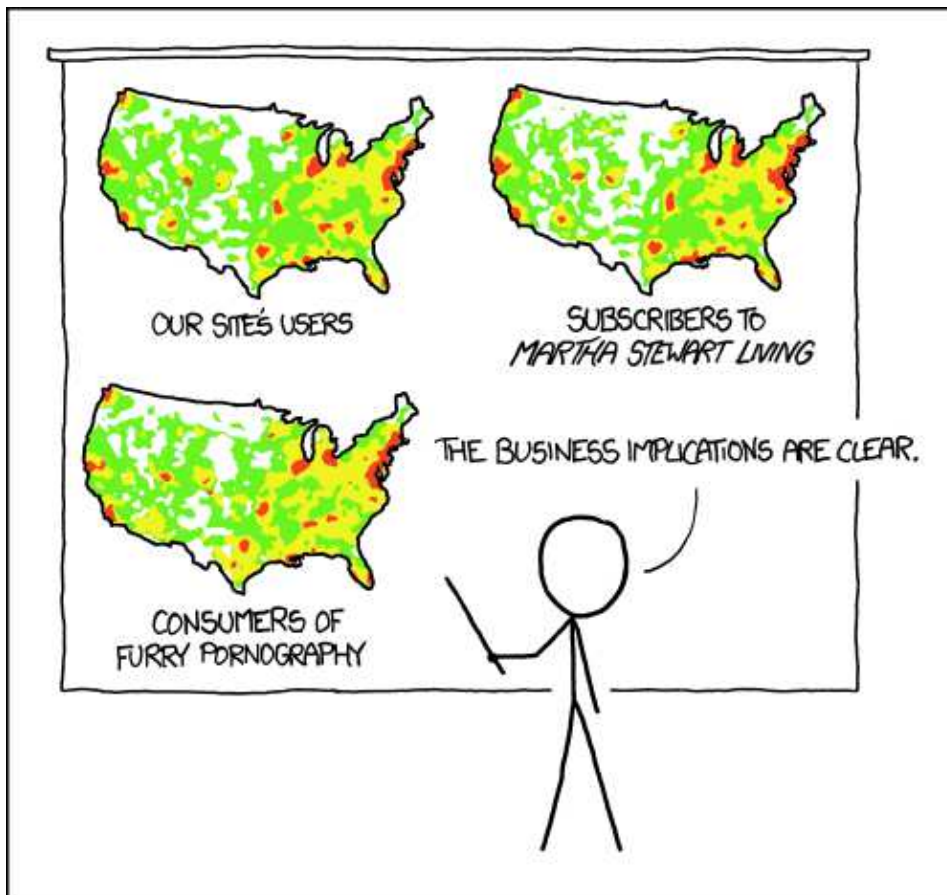

Your Answer	Score	Explanation
<input type="radio"/> Statistical inference.		
<input type="radio"/> The data.		
<input checked="" type="radio"/> The question you are trying to answer.	✓ 4.00	
<input type="radio"/> Hacking skills.		

Total

4.00 / 4.00

### Question 3

If the goal of a study was to relate Martha Stewart Living Subscribers to Our Site's Users based on the number of people that lived in each region of the US, what would be the potential problem?

**Your Answer**

**Score**

**Explanation**

☒ There would be confounding because the number of people that live in an area is related to both Martha Stewart Living Subscribers and Our Site's Users.

✓ 4.00

☐ We would be data dredging because we collected data on thousands of places in the United States.

☐ We wouldn't know the sensitivity of our predictions.

☐ We couldn't be sure whether subscribing to Martha Steward Living causes people to be Users of Our Site or the other way around.

Total	4.00 / 4.00
-------	----------------

## Question 4

What is an experimental design tool that can be used to address variables that may be confounders at the design phase of an experiment?

Your Answer	Score	Explanation
-------------	-------	-------------

☐ Data cleaning.

☐ Using all the data you have access too.

☒ Fixing variables.  4.00

☐ Using regression models.

Total	4.00 / 4.00
-------	-------------

## Question 5

What is the reason behind the explosion of interest in big data?

Your Answer	Score	Explanation
-------------	-------	-------------

☐ We recently discovered ways to use data to answer scientific and business questions.

☐ We have better experimental design now than previously.

☐ Technologies like Hadoop and Map Reduce started the big data era.

☒ The price and difficulty of collecting and storing data has dramatically dropped.  4.00
