Getting Help

Roger D. Peng, Associate Professor of Biostatistics
Johns Hopkins Bloomberg School of Public Health

Asking Questions

· Asking questions via email is different from asking questions in person

· People on the other side do not have the background information you have

    - they also don't know you personally (usually)

· Other people are busy; their time is limited

· The instructor (me) is here to help in all circumstances but may not be able to answer all questions!

Finding Answers

- Try to find an answer by searching the archives of the forum you plan to post to.

- Try to find an answer by searching the Web.

- Try to find an answer by reading the manual.

- Try to find an answer by reading a FAQ.

- Try to find an answer by inspection or experimentation.

- Try to find an answer by asking a skilled friend.

- If you're a programmer, try to find an answer by reading the source code.

Asking Questions

· It's important to let other people know that you've done all of the previous things already

· If the answer is in the documentation, the answer will be "Read the documentation"

  - one email round wasted

Example: Error Messages

```
> library(datasets)
> data(airquality)
> cor(airquality)
Error in cor(airquality) : missing observations in cov/cor
```

Google is your friend

Asking Questions

- What steps will reproduce the problem?

- What is the expected output?

- What do you see instead?

- What version of the product (e.g. R, packages, etc.) are you using?

- What operating system?

- Additional information

Subject Headers

· Stupid: "Help! Can't fit linear model!"

· Smart: "R 3.0.2 lm() function produces seg fault with large data frame, Mac OS X 10.9.1"

· Smarter: "R 3.0.2 lm() function on Mac OS X 10.9.1 -- seg fault on large data frame"

Do

- Describe the goal, not the step

- Be explicit about your question

- Do provide the minimum amount of information necessary (volume is not precision)

- Be courteous (it never hurts)

- Follow up with the solution (if found)

Don't

· Claim that you've found a bug

· Grovel as a substitute for doing your homework

· Post homework questions on mailing lists (we've seen them all)

· Email multiple mailing lists at once

· Ask others to debug your broken code without giving a hint as to what sort of problem they should be searching for

Case Study: A Recent Post to the R-devel Mailing List

```
Subject: large dataset - confused
Message:
   I'm trying to load a dataset into R, but
      I'm completely lost. This is probably
      due mostly to the fact that I'm a
      complete R newb, but it's got me stuck
      in a research project.
```

Response

Yes, you are lost. The R posting guide is
  at http://www.r-project.org/posting-
  guide.html and will point you to the
  right list and also the manuals (at
  e.g. http://cran.r-project.org/
  manuals.html, and one of them seems
  exactly what you need).

Analysis: What Went Wrong?

· Question was sent to the wrong mailing list (R-devel instead of R-help)

· Email subject was very vague

· Question was very vague

· Problem was not reproducible

· No evidence of any effort made to solve the problem

· RESULT: Recipe for disaster!

Places to Turn

· Class discussion board; your fellow students

· r-help@r-project.org

· Other project-specific mailing lists (This talk inspired by Eric Raymond's "How to ask questions the smart way")
